

Infrastructure

Hardware Solutions

As customers expand and upgrade their information technology infrastructure, there is a demand for high-quality hardware solutions — such as servers, desktops, and devices.

These solutions are built and configured by i-TEAM according to customer business needs and supported to ensure customer satisfaction.

WAN Optimisation

The goal of all network infrastructures is to deliver applications effectively to users.

However, maintaining an acceptable level of application performance across the WAN proves a consistent challenge.

i-TEAM has a complete product and solution of application acceleration platforms designed to improve application response times within central sites, to branch offices, and for remote users.

VoIP

From a converged IP infrastructure to a traditional voice systems – or a hybrid combination of both – Mitel solutions are the foundation for scalable enterprise networks that offer compelling benefits at both the user and infrastructure level.

i-TEAM will ensure success, delivering your solution in accordance with project management principles and best practices.

i-TEAM is positioned as a true VoIP solutions provider

Firewall and Security solutions

i-TEAMs firewalling and security solutions set from Fortinet provides security systems that are the new generation of real time network protection systems.

They detect and eliminate the most damaging, content-based threats from email and Web traffic such as viruses, worms, intrusions, inappropriate Web content and more in real time - without degrading network performance.

Printer Networking

With costs being driven down daily, most companies forget to focus on a central expense, their printing. Most companies have no concept of actual printing costs and when broken down, cost per page becomes the real issue.

Along with specialized engineers our sales team can audit your printing infrastructure and propose a more efficient and cost effective solution.

Environmental Management

RARS ENV is a TCP/IP network solution for monitoring environmental and equipment alarm status in buildings, server rooms and remote equipment rooms. RARS detects threatening conditions such as fire, flood or overheating before equipment is damaged or destroyed.

A wide range of sensors, encompassing temperature, humidity, water, UPS, fire, generator, low diesel level, and door can be incorporated to provide a complete environment monitoring and control solution.

Enterprise Networks

Our Enterprise Network Installation service ensures the optimal result while minimizing the risk of disruption to your business.

The collective knowledge and skills of i-TEAM engineers and the highest specialisations reduces the risks, challenges and complexities of designing, implementing and managing a network that meets day-to-day demands and long-term business strategies.
